Growing Challenges to Credit Risk Management

- **Global commoditization of products and services**
- **Exponential growth of online commerce**
 - Increasing speed of business transactions
 - Influx of new counterparties
- **Contracts vs. capital**
- **Energy companies in particular are exposed to volatile energy prices and margining lags**
- **Need more sensitive, market-driven credit information**

Key Presentation Messages

- **Measurement** - Risk of extending credit must be accompanied by appropriate return
- **Monitoring** - Credit exposures can be tracked in real-time
- **Management** - Credit exposures can be quickly hedged and, where appropriate, diversified

A New Process for Credit Risk Portfolio Management

The cost of credit is determined by the market in real-time.

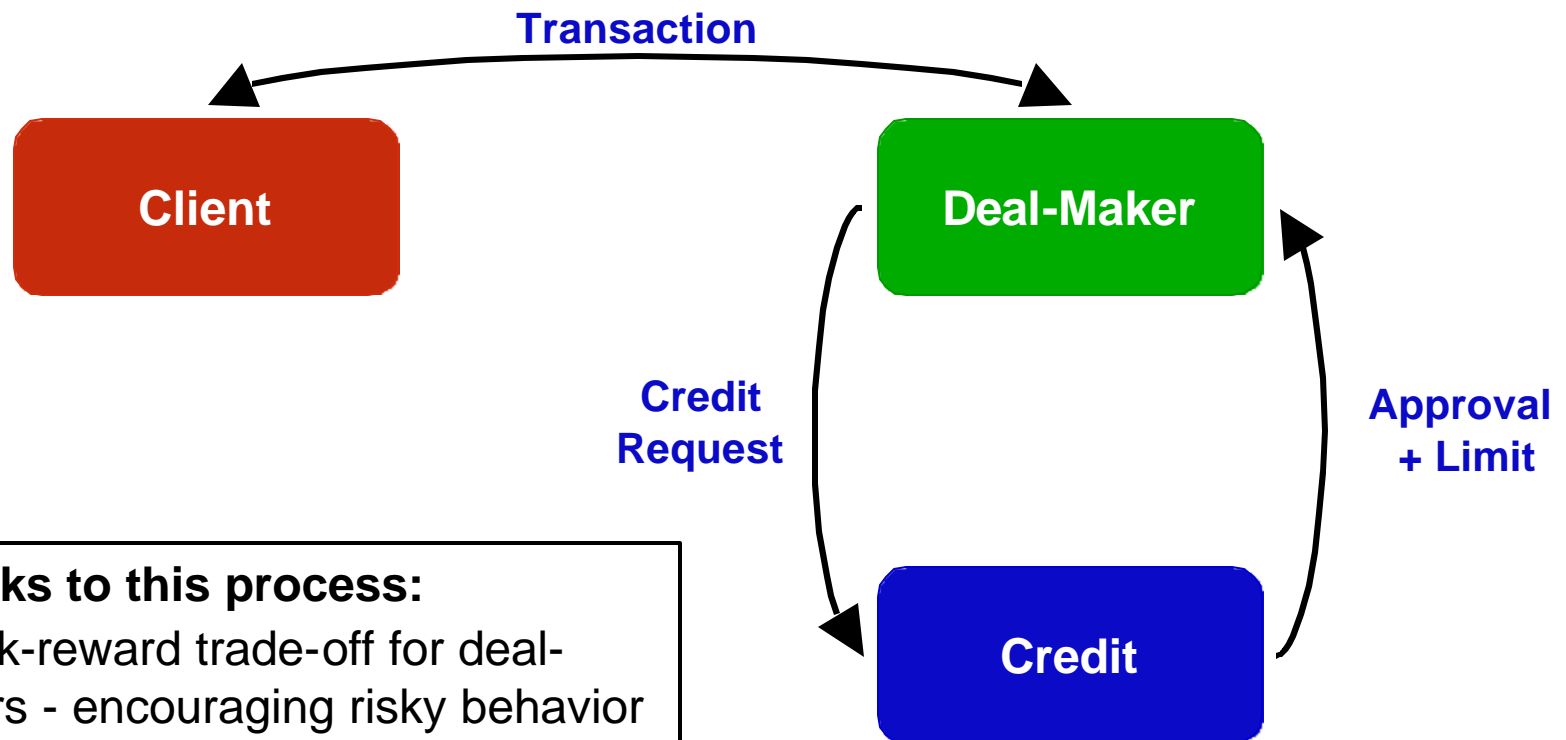

**Measure the
risk/reward
profile of
extending credit**

Traditional Credit Risk Management Process

Binary Credit Decisions

Drawbacks to this process:

- No risk-reward trade-off for deal-makers - encouraging risky behavior
- Concentration risk is ignored
- Credit risk is often not transferred - we wear the risk of our industry

A New Process for Credit Risk Portfolio Management

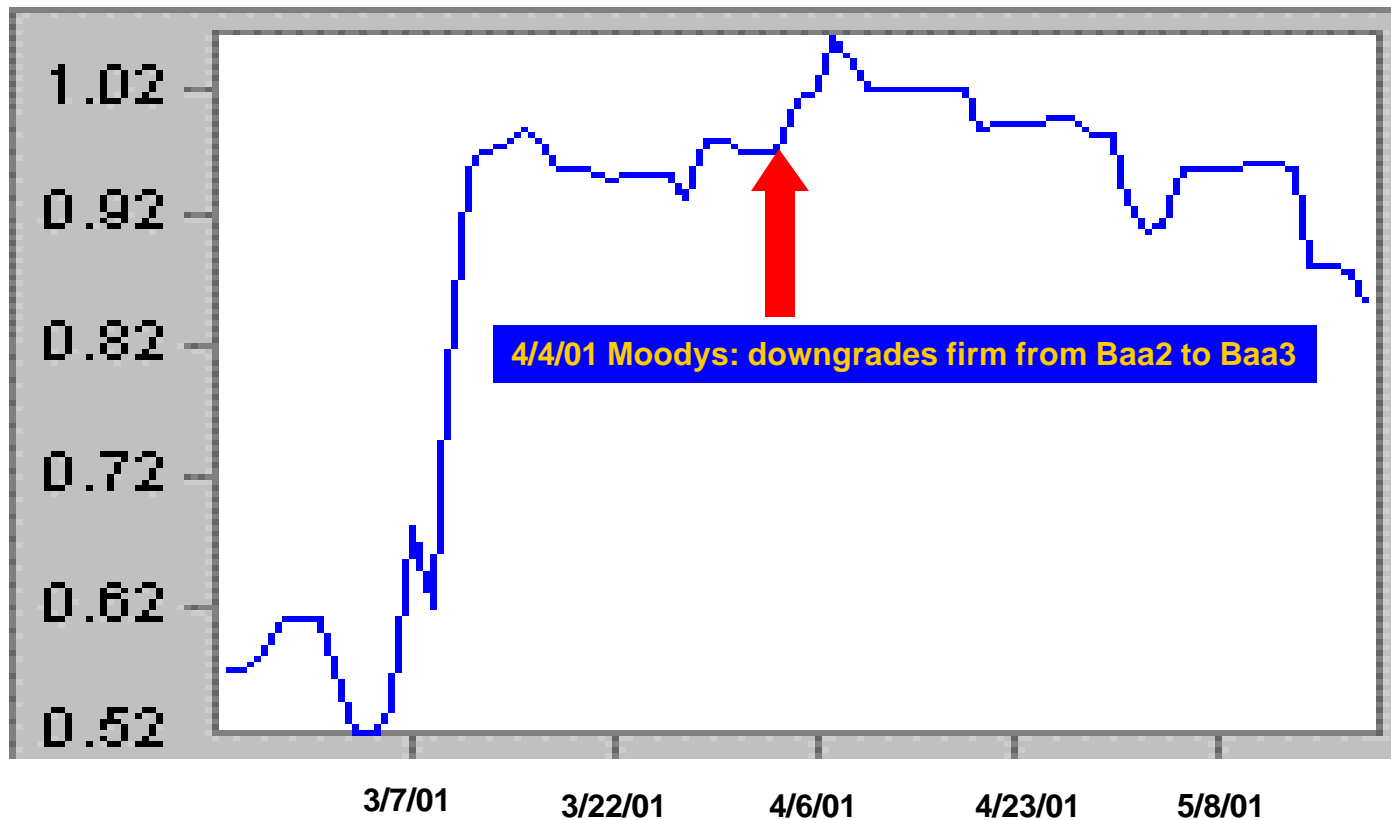

The cost of credit is determined by the market in real-time.

Credit Spreads Can Be Predictive of Downgrades

A Fortune 500 industrial company

S&P has not taken any action on rating downgrades since 1999

Third-Party Monitoring Tools

- **Enron Credit**
- **Rating agencies**
- **Other third party modeling providers**
 - Equity volatility models
 - Private firm models

A New Process for Credit Risk Portfolio Management

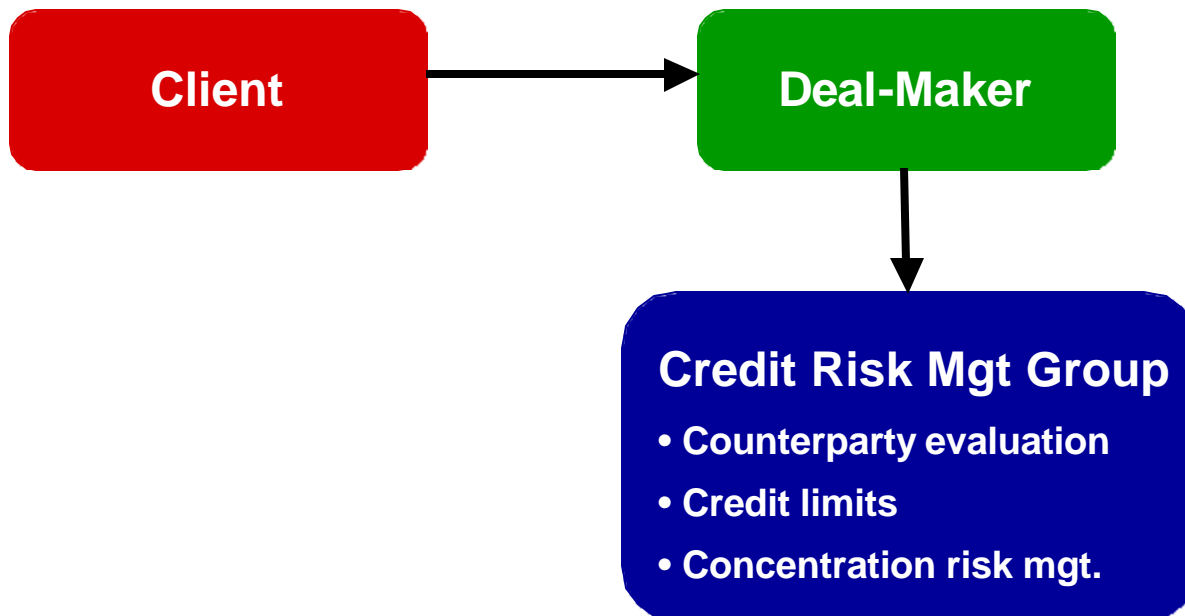

The cost of credit is determined by the market in real-time.

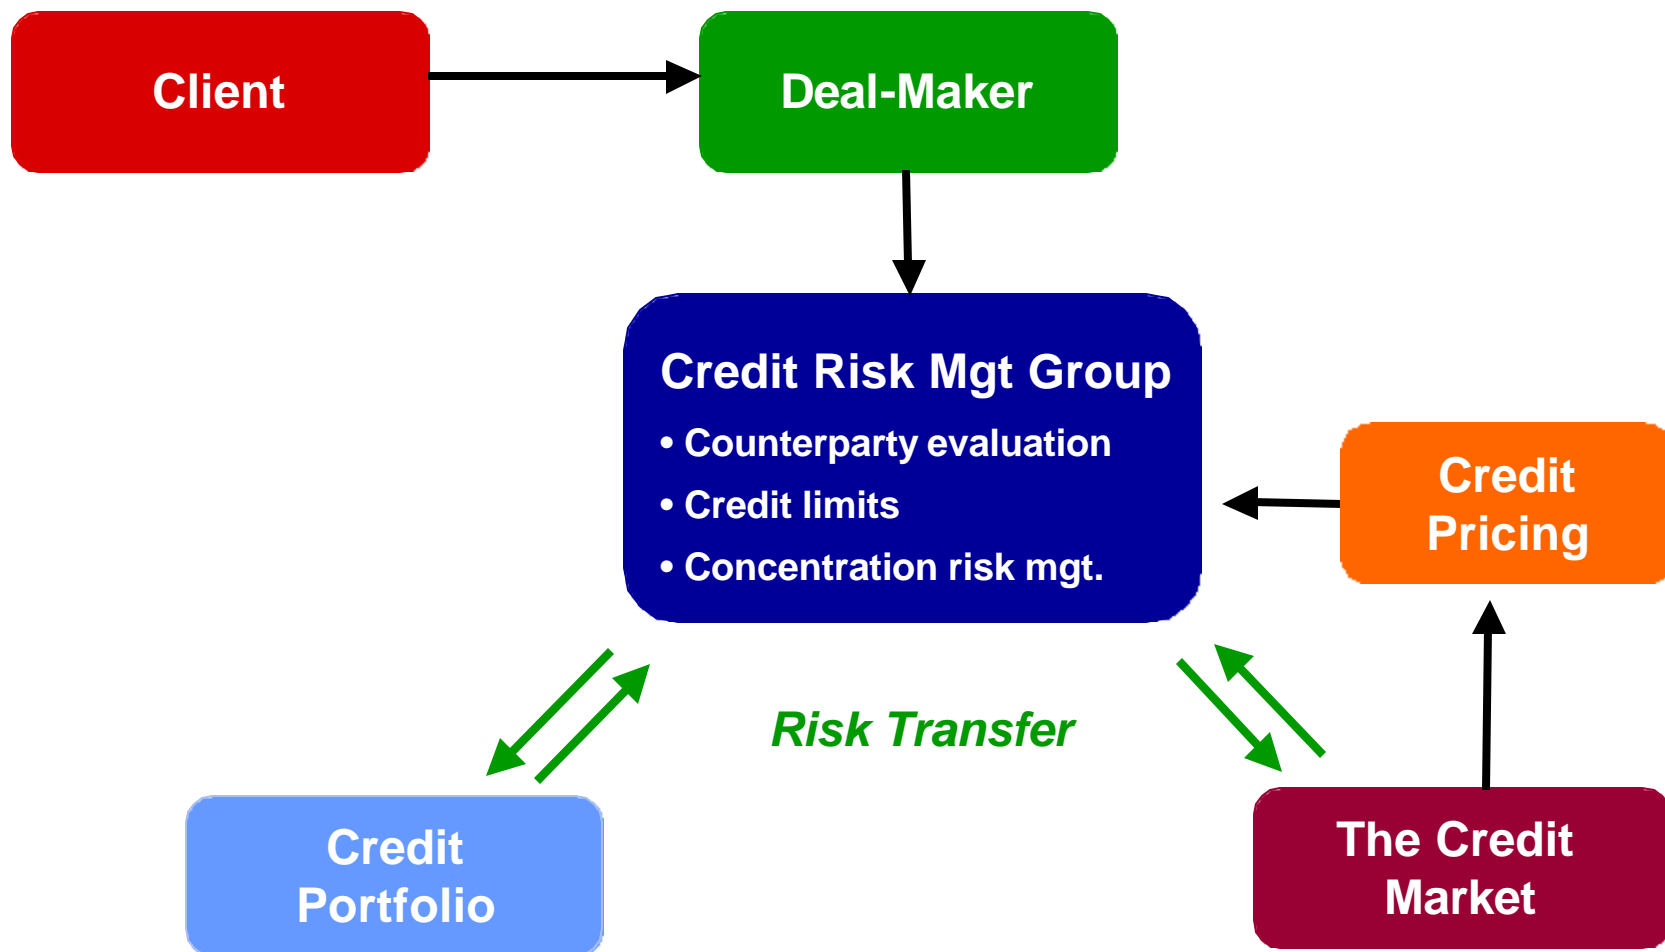

***Companies who effectively manage credit risk
will have a competitive advantage***

Implementing the New Credit Risk Management Process

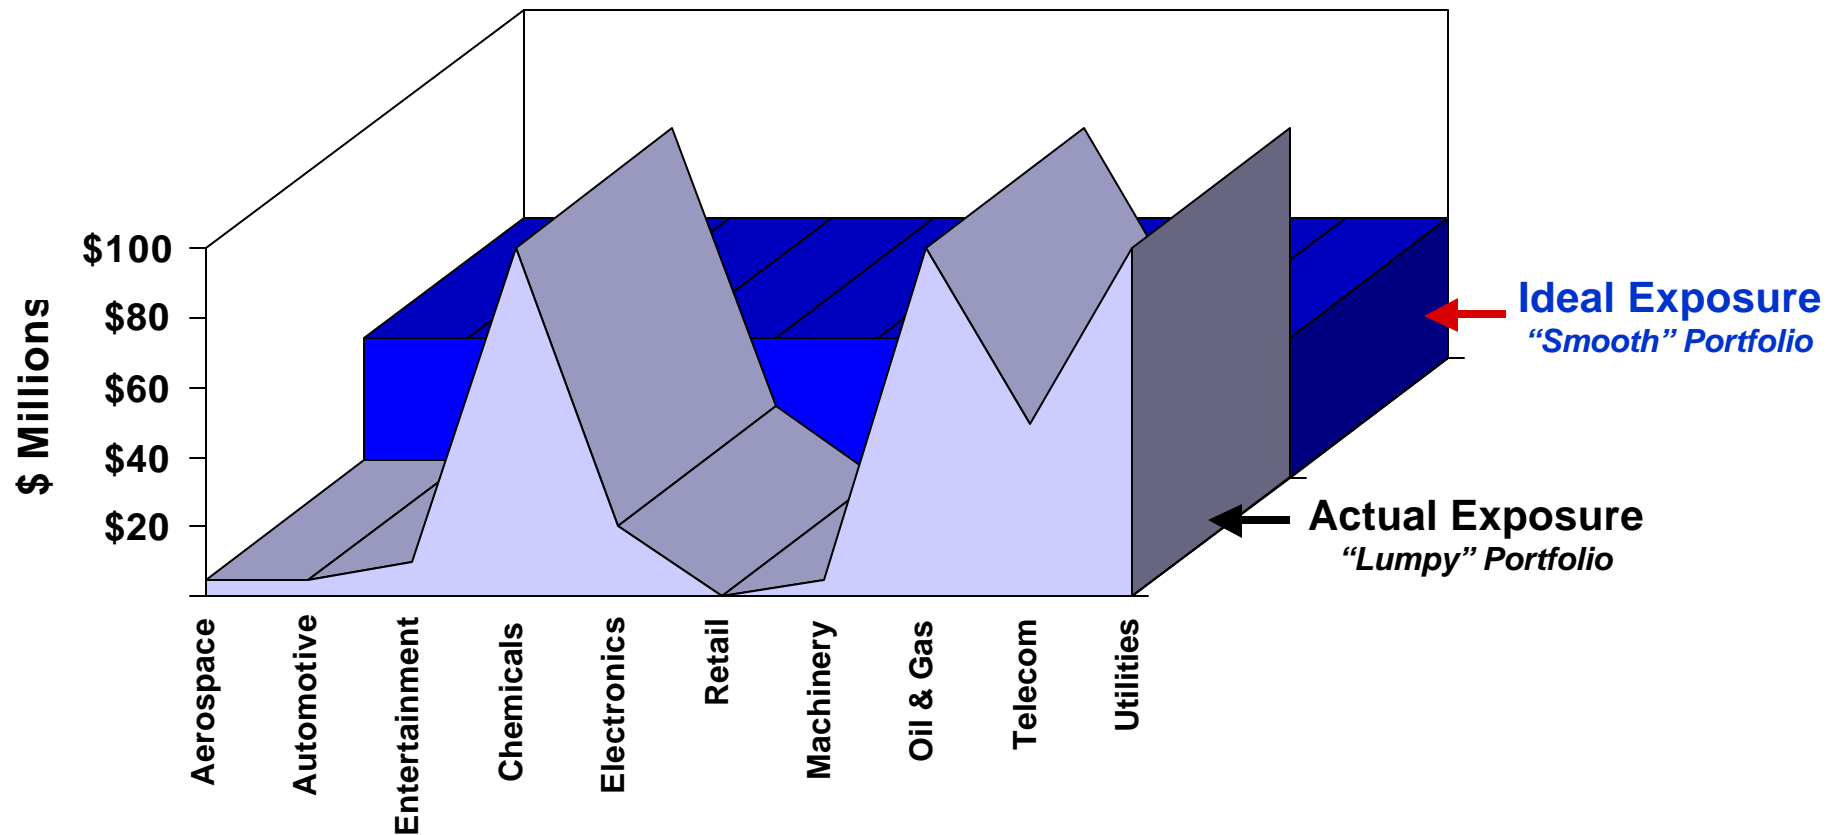

Implementing the New Credit Risk Management Process

Risk Can Be Diversified Through Active Portfolio Management

- Many companies have concentrated exposures
- By actively managing their credit portfolios, firms can spread credit risk across many industries and benefit from diversification

Third-Party Risk Management Tools

- **Credit Insurance**
- **Credit Default Swaps**
- **Digital Bankruptcy Swaps**

Credit Insurance

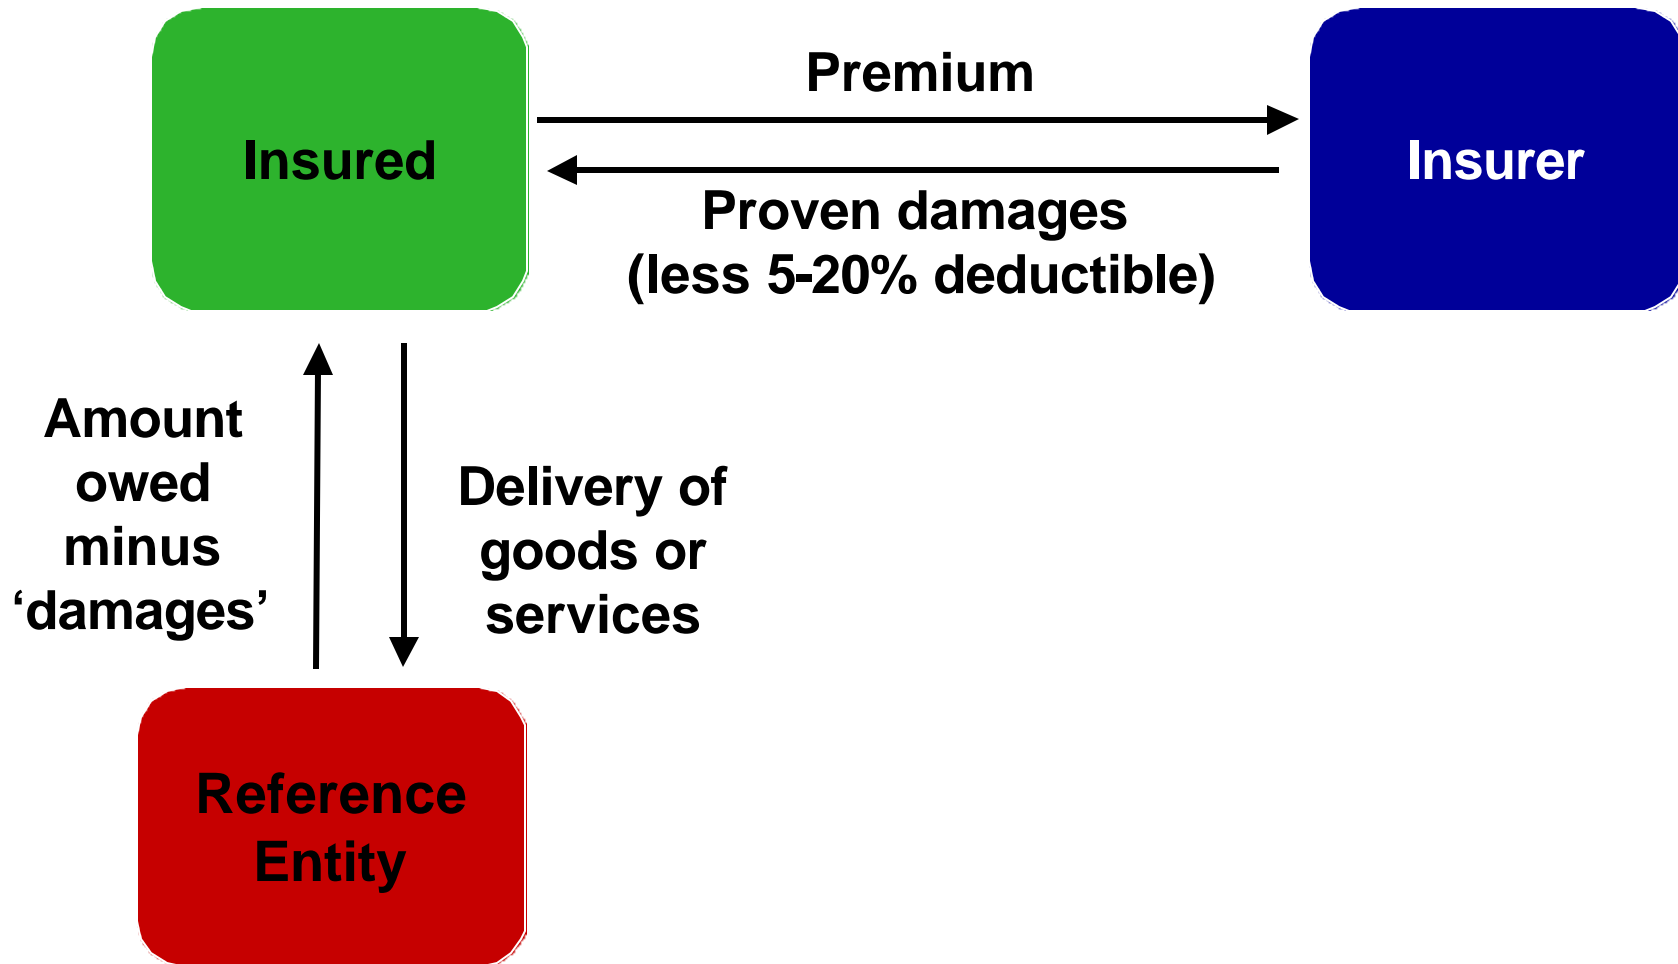

- **Available from insurance companies & financial underwriters**
- **Covers non-payment risk due to bankruptcy or political events**
- **May be cancelled due to changes in financial position, usually with a 30 day notice period**

Credit Insurance Structure

Example

Credit Default Swaps

- **Most commonly traded credit derivative**
- **Use standard master agreements developed by International Swaps and Derivatives Association (ISDA)**
- **Designed to hedge non-payment risk in financial obligations (bonds, loans, other debt) and mirrors default language in lending covenants**
 - Bankruptcy
 - Failure to Pay
 - Obligation Acceleration
 - Restructuring
 - Repudiation/ Moratorium

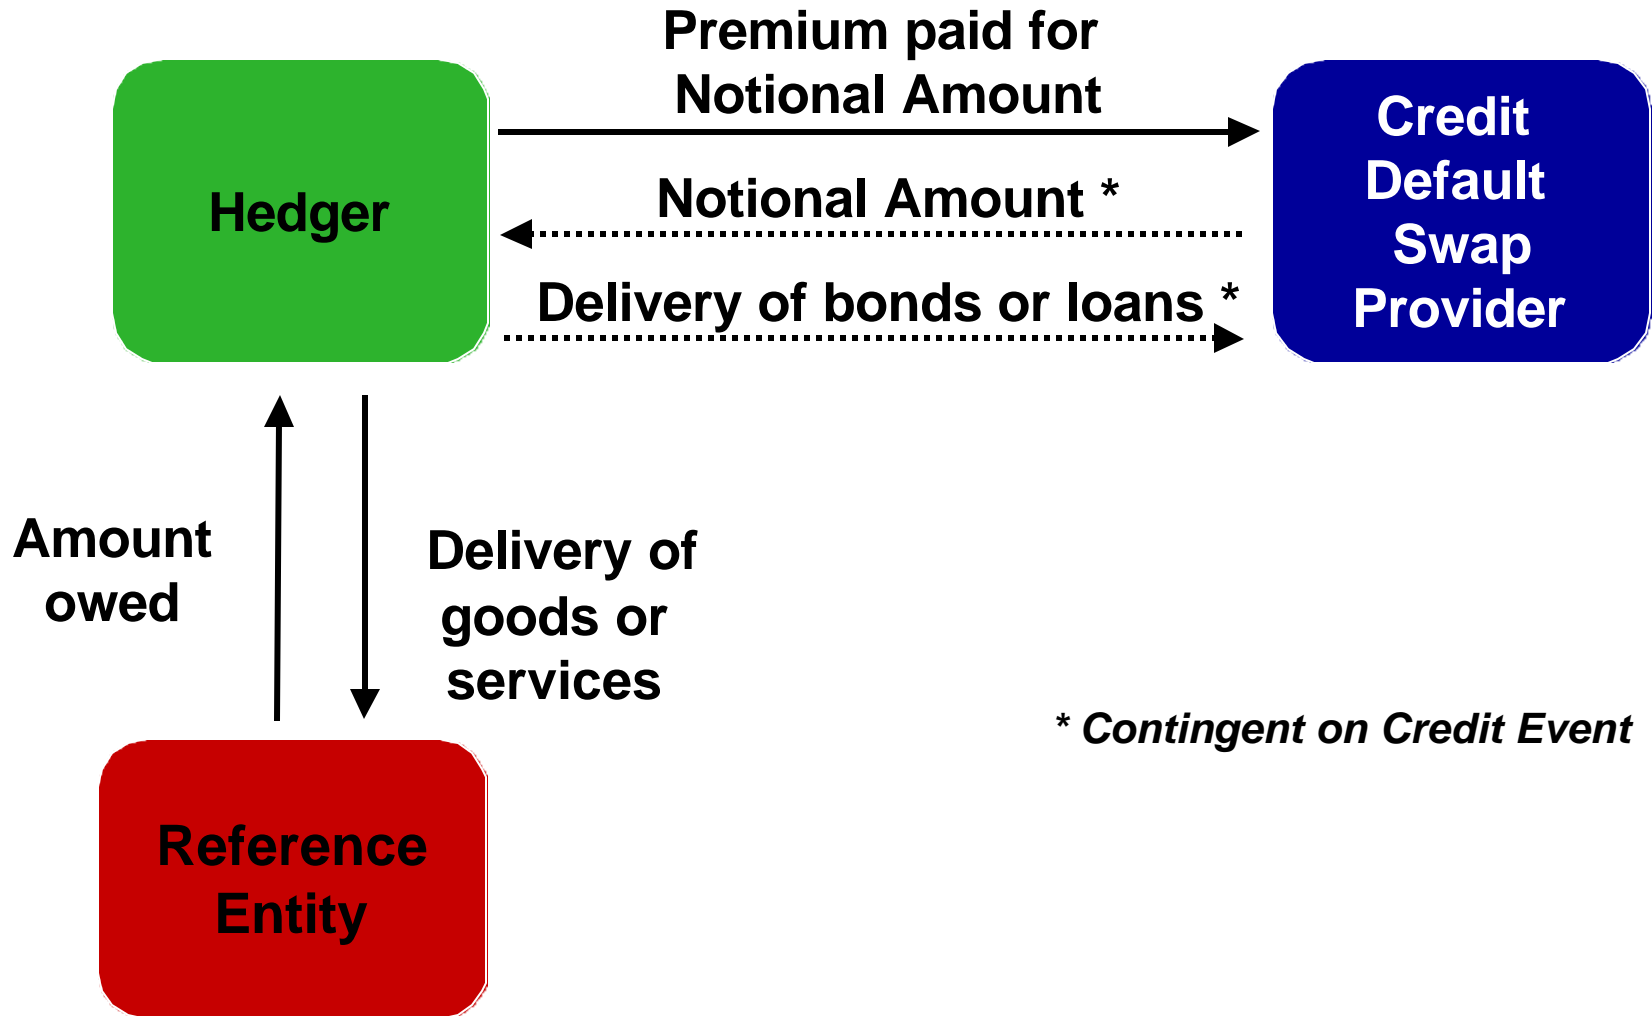

Technical Defaults

Credit Default Swap Structure

Example

Digital Bankruptcy Swaps

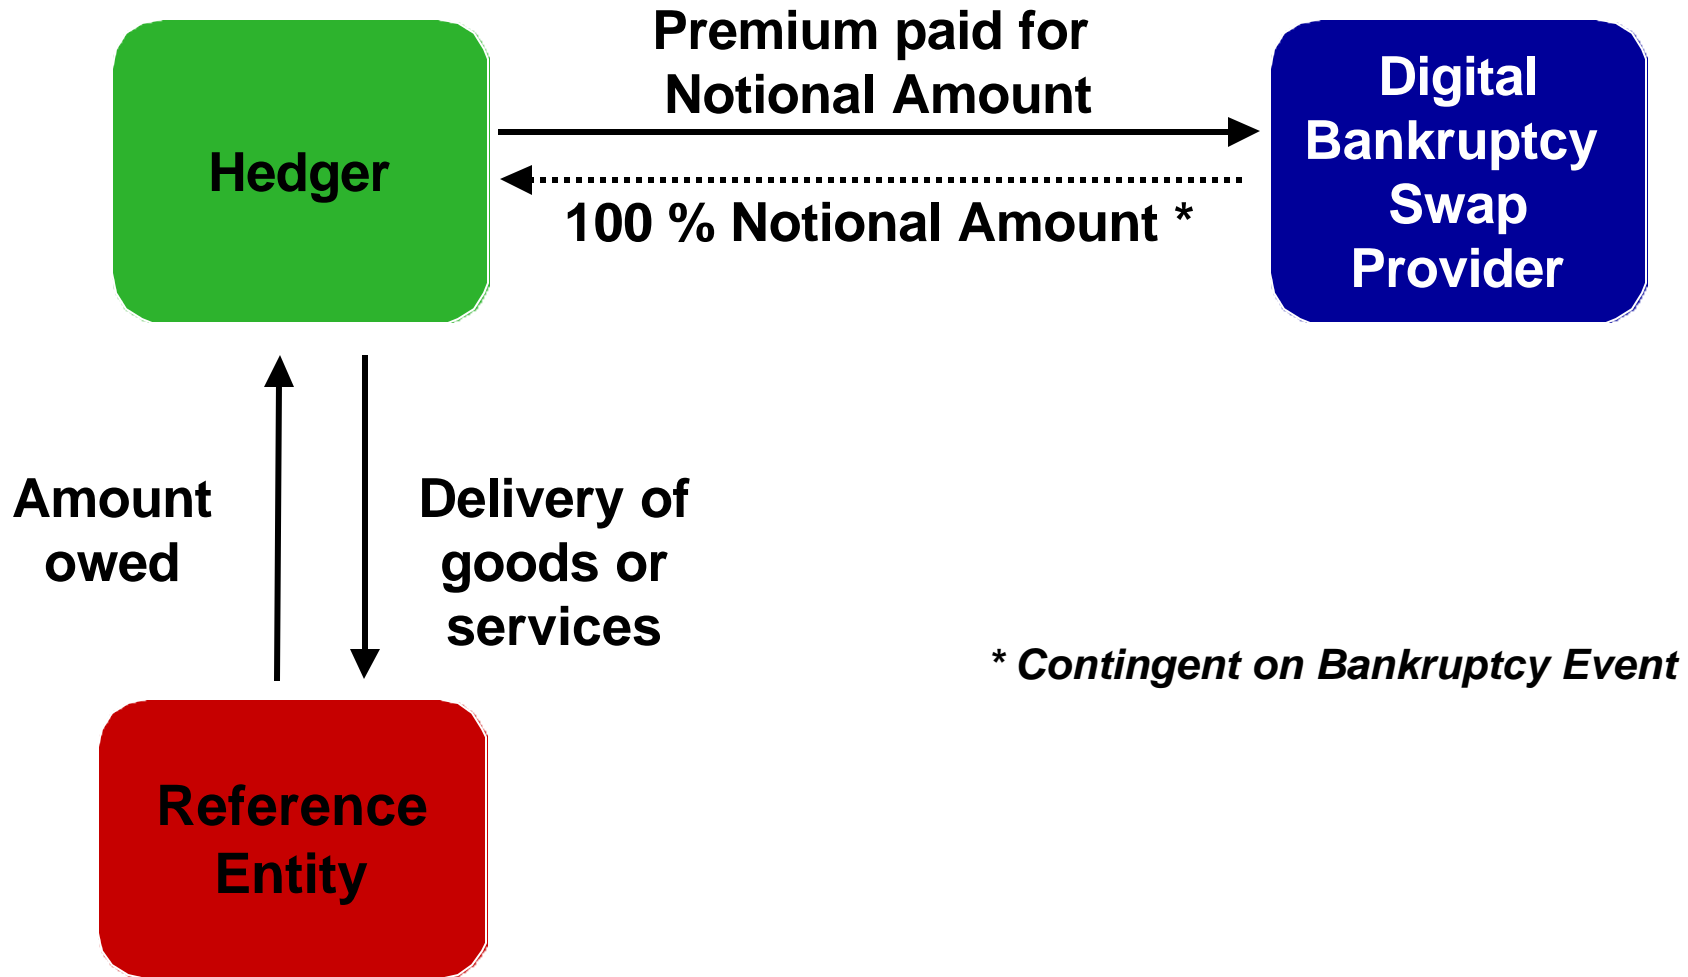

- **Alternative to credit default swaps, designed for corporate use**
- **Bankruptcy is the sole trigger**
- **Designed to provide a liquid product with which a firm can hedge its counterparty credit risk such as:**
 - trade receivables
 - supplier financing
 - strategic/business disruption risk

Digital Bankruptcy Swap Structure

Example

Credit Protection Grid

	Digital Bankruptcy Swap	Letter of Credit	Credit Insurance	Credit Default Swaps
Suitability	General Corporate	Export/import	General corporate	Financial Institution
Clarity of Credit event	Definite	High	Moderate	High
Size of payout	Full principal	Full Principal	Estimated Loss	Variable
Time to payout	5 days	5-30 days	2-6 months	3 days-2 months
Pricing transparency	High	Low	Low	Moderate
Ease of execution	Standardized/online	Days	Months	Standardized
Business restrictions	None	Variable	Moderate	None
Flexibility	High	Low	Low	High
Liquidity	High	Low	None	Moderate
Confidentiality	High	High	Moderate	High

Benefits of a Market-based Approach

- **Maintain customer concentration without credit concentration**
- **Prevent unexpected losses through vigilant review of counterparties**
- **Objective pricing of risk/reward parameters**
- **Lower internal reserve requirements**
- **Efficient risk transfer**
 - Faster transaction speed
 - Flexibility

www.enroncredit.com

www.enroncredit.com provides credit information on more than 10,000 companies
